

## SOLID AND DURABLE INDUSTRIAL FLOOR

SICONOFLOOR G20-E

## **Product technical sheet:**

Description of the	Universal resin preparation for priming. Perfect for making resin mortars and screeds. Filled, two-component epoxy								
product Application	resin. ECONOMICAL VERSION OF SICONOFLOOR GF-E RESIN.								
Application	<ul> <li>Material for indoor use as a priming layer,</li> <li>Priming concrete substrates, cement mortars, mortar and resin coatings,</li> </ul>								
			creeds and levelling puttie						
	<ul> <li>Protection of concrete against dusting and penetration of moisture,</li> <li>Reinforcement of all types of mineral substrates,</li> </ul>								
	<ul> <li>Reinforcement of all types of mineral substrates,</li> <li>Material for indoor and outdoor use.</li> </ul>								
Properties									
Toperties	<ul> <li>High adhesion (above 1.5 MPa)</li> <li>No tendency to sedimentation (does not settle),</li> </ul>								
	<ul> <li>No tendency to sedimentation (does not settle),</li> <li>No tendency to eyelet formation on a properly prepared substrate,</li> </ul>								
	<ul> <li>Increases the adhesion of successive layers to the substrate,</li> </ul>								
	<ul> <li>Good mechanical characteristics (hardness, tensile strength, bending strength),</li> <li>Provides hydrophobic properties,</li> <li>Ease of application,</li> <li>Versatility.</li> <li>Frost resistance,</li> <li>Reduced tendency to crystallise.</li> </ul>								
						<ul> <li>Good price/o</li> </ul>			
								ies of Siconofloor G20-E	
Form		Component A modifie	<u> </u>

## SOLID AND DURABLE INDUSTRIAL FLOOR

## SICONOFLOOR G20-E

	mix for a further 2 minutes until a homogeneous mixture is obtained. The mixing ratios of component A and component B are indicated on the packaging and must not be changed. A change in the ratio will result in the product having characteristics different from those declared by the Producer. Excessive mixing may cause aeration of the resin and should therefore be avoided. Use a low speed electric mixer (300 to 400 rpm) or other suitable equipment to mix the resin.			
Priming layer	Apply SICONOFLOOR G20-E using a brush or roller according to the art of painting, making sure that a uniform, continuous coating is obtained, if necessary apply a second layer.			
Levelling mortar	Spread the SICONOFLOOR G20-E mortar to the desired thickness with a trowel or a chemical resistant rubber squeegee.			
Resin screed	SICONOFLOOR G20-E should be spread, along with the appropriate aggregate, with the help of steel laths, preferably on rails. After a short time, compact the mortar and level it with trowels or a power trowel (20 ÷ 90 revolutions per minute) with blades covered with chemically resistant material. After finishing work, tools should be cleaned with acetone or xylene immediately after use. Hardened or bound material can only be removed mechanically.			
Storage conditions for kit components	SICONOFLOOR G20-E resin is a material with a reduced tendency to crystallise. Store in a dry place at 5~30°C. Components A and B in the liquid state are water-polluting agents and should not enter sewage systems, soil or water courses. The resin after curing is neutral for the environment.			
	Comments and recommendations			
Health and safety conditions	Wear protective clothing, gloves and goggles whenever handling resin. When working in confined or enclosed spaces, and during drying, adequate ventilation must be provided. Do not weld or expose open flames during the work. Use lighting lamps with the appropriate protection. Detailed information on health, safety and environmental data, toxicological properties of the material, etc. is available in the Material Safety Data Sheet for Siconofloor G20-E. Do not allow contact with the skin. Avoid breathing vapours from heated material. Do not allow individual components to come into contact with acids, strong oxidisers, alkalis. All employees should be thoroughly trained in the handling of epoxy resins and hardeners for existing hazards. Allergy sufferers must not be commissioned to work with resins. Protective gloves and goggles must be worn if there is a risk of resins splashing. Always wash your hands with water and mild cleaning agents after contact with the skin. Do not use benzene, toluene or carbon tetrachloride! For hygiene reasons, do not consume food or drinks in the workplace and do not smoke.			
Final remarks	These specifications are based on trials and laboratory tests. Practical results of measurements may differ from those provided, due to circumstances beyond the control of Sicon Sp. K. All information is given in good faith and takes into account current knowledge and experience. The producer indicates that the colour of the finished floor may vary. This phenomenon does not indicate a defect in the floor or reduced technical specifications. Possible discolouration may occur due to the way the work and drying are performed. It is recommended that particular areas be covered from batches of material from one production run. The product documentation is general information, appropriate under certain conditions. It is recommended that the purchaser carry out an application test under specific construction environmental conditions prior to large-scale application of the product. The supplier has no influence on the types of application, application methods or execution conditions on the site, therefore these instructions may not be held responsible for the end result of the application Recommendations of Sicon's associates that deviate from the information in the technical sheet are mandatory only if they are confirmed in writing.  Release Date: 02/2021  All previously issued sheets of the Siconofloor G20-E system shall expire on the date of issue of this sheet.
